## Recent Projects

**ScienceP.** (A full-stack responsive project for Science Knowledge) - Time period -4 days

[Live site](#)

[client site code](#)

[server site code](#)

- Users can comment, reacts on topics, and pay by stripe payment
- Used ChatGPT API for asking any question to ChatGPT from this website.
- Freely asking questions and giving answers to any questions are also implemented.

Used Technologies: React.js, Redux. Node.js, Express.js, MongoDB, Firebase, JWT

**Tech Bazar:** (A full-stack project for selling used tech products) - Time period -4 days

[Live site](#)

[client site code](#)

[server site code](#)

- Implemented an Admin portal to manage all orders and products and make payments.
- Developed a user portal to manage their profile, orders, and Stripe payment
- Buyer, Seller, and Admin routes are separate. Admin can delete any buyer or seller and also verify the seller. The seller can add and delete his product.

Used Technologies: React.js, Node.js, Express.js, MongoDB, Firebase, JWT, Tailwind CSS

**Green Food**(A full-stack project for review foods) - Time period -3 days.

[Live site](#)

[client site code](#)

[server site code](#)

- Implemented ContextAPI to avoid prop-drilling, and store all data at MongoDB
- The user has to log in to add and delete your review. Firebase authentication is used here.
- A User portal is also manufactured to manage their profile, orders, and make payments

Used Technologies: React.js, Express.js, Node.js, MongoDB, Firebase, JWT, Tailwind CSS
